# Female Genital Mutilation: Harmful and Un-Islamic

## GLOBAL MUSLIM WOMEN'S SHURA COUNCIL

The Global Muslim Women's Shura Council is a global and inclusive council of Muslim women scholars, activists, and specialists. The Council endeavors to connect Islamic principles to society's most pressing issues and develop holistic strategies for creating positive social change. In the following statement, the Shura Council uses The World Health Organization (WHO) criteria for the definition of Female Genital Mutilation (FGM).

Female Genital Mutilation (FGM) is a broad and somewhat problematic label that describes the partial or total removal of the external female genitalia or other injury to the female genital organs for non- medical reasons. Unlike comparable practices that are undertaken in the medical context, such as genital plastic surgeries and non-elective genital modification for intersex infants, FGM describes procedures performed on a minor female for traditional or cultural reasons in non-medical contexts. This Shura Council statement uses The World Health Organization (WHO) criteria for the definition of FGM.

The World Health Organization classifies FGM into four major types, based on severity of excision.<sup>2</sup> FGM, therefore, describes a varied range of practices, including the following: slight pricking or nicking of the clitoral hood; hoodectomy (excision of the clitoral hood); clitoridectomy (excision of the clitoris); the excision of the clitoris and labia minora and majora; and infibulation (suturing) with excision of the external genitalia.

Commonly cited reasons for the practice include the faulty beliefs that FGM is "a good tradition" or a religious requirement or that it

ensures "cleanliness" and prevents excessive clitoral growth. FGM is also deeply connected to marriage rituals and ideas about protecting virginity and preventing promiscuity.<sup>3</sup>

FGM is practiced openly in 28 different African countries, as well as secretly in parts of the Middle East, Europe, Australia, and the United States. Over 130 million women worldwide have been affected by some form of FGM, and three million girls are at risk every year. Most children are subjected to FGM between the ages of four and ten years. However, there has been a recent downward shift in the age of victims, as parents try to reduce trauma to their children, avoid government interference, or forestall resistance from the children themselves.<sup>4</sup> Some women who escaped FGM during childhood may later undergo FGM as a prerequisite for marrying into a community.

FGM has been widely condemned by political and religious authorities and is banned by a broad network of local, national, and international laws. Countries with national laws against FGM include Burkina Faso, Central African Republic, Djibouti, Ghana, Great Britain, Guinea, Sudan, Sweden, and the United States. In other countries, child abuse laws

cover FGM. The governments of Benin, Burkina Faso, Cameroon, Central African Republic, Côte d'Ivoire, Djibouti, Egypt, Eritrea, Ethiopia, Gambia, Guinea, Kenya, Niger, Senegal, Sudan, Tanzania, Togo, and Uganda have declared their commitment to eradicating the practice.<sup>5</sup> The WHO, United Nations Children's Fund, and United Nations Population Fund have issued joint statements against FGM, recognizing it as a major human rights violation against girls and women.<sup>6</sup> Major international treaties that ban the practice include Convention on the Elimination of all Forms of Discrimination against Women (CEDAW) and Convention on the Rights of the Child. Regional treaties that forbid the practice include The African Charter on Human and Peoples' Rights (the Banjul Charter) and its Protocol on the Rights of Women in Africa and the African Charter on the Rights and Welfare of the Child. High-level Islamic religious scholars from around the world have denounced FGM with legal opinions (fatawa). A 2005 report entitled, "Children in Islam: Their Care, Development and Protection," issued by UNICEF and the International Islamic Center for Population Studies and Research at Al-Azhar University, also strongly condemns the practice.<sup>7</sup>

## FGM IS HARMFUL

Medical consequences of FGM include, but are not limited to, the following: death through shock and/or excessive bleeding; infection; sepsis; urine retention; ulceration of the genital region; injury to adjacent genital tissue; scarring; infertility; cysts; painful sexual

intercourse; increased risk of transmission of sexually transmitted diseases, including HIV/AIDS; and a range of resulting psychological and psychiatric problems.<sup>8</sup> Although all FGM procedures carry health risks, infibulation (suturing) with excision, which accounts for 10% of all FGM cases in Africa, is by far the most dangerous to children and women.<sup>9</sup>

FGM procedures are often performed in unsterile environments and with little or no anesthesia. In areas of the world where medical facilities are ill-equipped or inaccessible, children who develop uncontrolled bleeding or infection die within hours of the first incision.<sup>10</sup> Women who have undergone FGM are significantly more likely to die during childbirth and give birth to a stillborn child.<sup>11</sup> In fact, FGM-practicing regions have the world's highest maternal and infant mortality rates.<sup>12</sup>

Research suggests that FGM can be eliminated very rapidly if communities themselves decide to do so.<sup>13</sup> Unfortunately, FGM continues to endure because of cultural and political reasons and is often fallaciously justified on religious grounds.

## FGM IS UN-ISLAMIC

Muslim proponents of FGM often try to justify it on the basis of religion and the practice is widespread in several Muslim-majority countries. According to a UNICEF report based on Demographic and Health Surveys, FGM is most prevalent in the following countries: Guinea (99% prevalence in 1999); Egypt (97%

rate of prevalence among ever-married women in 2003)<sup>14</sup>; Mali (92% percent in 2001); and northern Sudan (90% prevalence in 2000).<sup>15</sup> Somalia and Djibouti are estimated to have prevalence rates of around 90%. FGM is also common in several Christian-majority countries in Africa including Ethiopia, Kenya, and The Central African Republic (CAR).<sup>16</sup> In Burkino Faso, Côte d'Ivoire, Mali, and Niger, Muslim women are more likely than Christian women to have undergone FGM. However, in Kenya and Tanzania, the reverse is true, with a higher percentage of Christian women than Muslim women undergoing FGM.<sup>17</sup> Exposure is also determined by ethnicity, locale, and education.<sup>18</sup>

This diversity stems from the fact that FGM is a social and cultural practice, not a religious one. It predates the birth of both Islam and Christianity. Origins of the practice are unclear; however, it is generally traced to Pharaonic Egypt, based on evidence found on mummies.<sup>19</sup> FGM is virtually absent in many Muslim-majority countries, including Iran and Saudi Arabia, where it can be found mainly among immigrant populations.<sup>20</sup> It is performed by Christians, Muslims, and Jews, as well as by members of non-Abrahamic religions in the areas where it is common.<sup>21</sup>

FGM as it is currently practiced has been overwhelmingly condemned by religious authorities and rendered illegal by government statutes and international treaties. Based on every single source guiding Islamic ethics, it is clear that FGM is unjustifiable on Islamic grounds. These sources include the Qur'an, the example and sayings of the Prophet

Muhammad (*sunnah* and *hadith*), the objectives and principles of Muslim religious law (*maqasid al-shari'a*), religious consensus (*ijma*), legal opinions (*fatwa*), and analogical deduction (*qiyas*).

## I. FGM Contradicts The Holy Qur'an

The Qur'an does not specifically mention female genital mutilation. However, the Qur'anic messages of health, justice, and compassion, which permeate the holy text, clearly contradict the practice of FGM. Several other Qur'anic verses strongly condemn acts that negatively affect the human body (Q 2:195; Q 4:119; Q 30:30), as FGM clearly does. Furthermore, the Qur'an promotes mutual pleasure during marital sexual intercourse (Q 2:187 and Q 30:21), which is severely limited by FGM.

According to the Qur'an, humans were created in "the best stature" (Q 95:4). Therefore, the human body is to be left as it was created by God, unless there is an acceptable reason for interfering with it. "Tradition" is not an acceptable reason, as the Qur'an strongly condemns those who blindly follow harmful traditions:

*But when they are told, "Follow what God has bestowed from on high," some answer, "Nay, we shall follow [only] that which we found our forefathers believing in and doing." Why, even if their forefathers did not use their reason at all, and were devoid of all guidance? (Q 2:170)*

Islam forbids all harmful and destructive cultural practices. One relevant example is

14 According to UNFPA, there has been a downward shift in these numbers among younger women. A recent 2008 Demographic Health Survey in Egypt (EDHS) reported that FGM prevalence rate among women from ages 15-49 is 91.1 percent; and 74 percent among girls age 15-17. "FGM/C in Egypt: Prevalence Rate and Prospects," UNFPA, [http://egypt.unfpa.org/english/fgmStaticpages/Oc-3b708e-9c55-4b05-994f-a437f89a81d9/Egypt\\_Prevalence\\_rate\\_and\\_Prospects.aspx](http://egypt.unfpa.org/english/fgmStaticpages/Oc-3b708e-9c55-4b05-994f-a437f89a81d9/Egypt_Prevalence_rate_and_Prospects.aspx).

female infanticide, which was “traditional” to pre-Islamic Arabia but came to be banned under Islam. The Qur’anic injunction against female infanticide and hurting innocents, therefore, is worth repeating here:

*“and when the girl child who was buried alive shall be asked ‘for what sin was she killed’” (Q 81:8-9)*

## **II. FGM Contradicts the Prophet’s Example and Words (Sunnah and Hadith)**

There is no mention of any female members of the Prophet’s household being cut, whereas there is evidence that his two grandsons, al-Hassan and al-Hussein, were circumcised at the age of seven days.<sup>22</sup>

The Prophet was exemplary in his kindness and gentleness towards all members of his family and is known to have said, “Whoever becomes the father of a girl, he should neither hurt her nor treat her with contempt.”<sup>23</sup> Speaking of one of his daughters, the Prophet noted, “[she] is a part of my body, and I hate what she hates to see, and what hurts her, hurts me.”<sup>24</sup>

Several hadith, the authenticity of which cannot be confirmed, mention female genital mutilation. The hadith most commonly used by proponents of FGM is the following:

Um Atiyyat al-Ansariyyah said: “A woman used to perform circumcision in Medina. The Prophet (pbuh) said to her: ‘Do not cut too severely as that is better for a woman and more desirable for a husband.’”

This is considered a “weak” hadith and can be

found in only one of the six hadith collections generally accepted as authentic.<sup>25</sup> Therefore, this hadith is not suitable for legal argumentation. In addition, there is also a great deal of contention as to its wording and interpretation.<sup>26</sup> Sayyid Sabiq, renowned scholar and author of *Fiqh-us-Sunnah*, has debunked as un-authentic every hadith concerning female circumcision.<sup>27</sup>

However, even if one were to entertain the possibility that this particular hadith is authentic, it does not justify FGM, because it does not encourage the practice, but instead curbs it: the Prophet is advising against cutting a woman’s genitalia severely enough to harm her and her relations with her husband. All but the most symbolic forms of FGM would be banned on the basis of this supposedly sympathetic hadith alone, even if it were authentic.

According to the International Islamic Center for Population Studies and Research at Al-Azhar University, “the use of the general term ‘Sunnah Circumcision’ [for FGM] is nothing but a form of deceit to misguide people and give the impression that the practice is Islamic.”<sup>28</sup>

## **III. FGM is Not Supported by Legal Consensus (Ijma) or Legal Opinions (Fatwa)**

There is no consensus within the four classical fiqh schools on FGM. Classical Islamic scholars who mention female circumcision allowed cutting only the uppermost skin of the clitoral prepuce.<sup>29</sup> Therefore, Islam amounted to a regulation and curbing of a pre-existing practice. In keeping with this curbing, currently the majority of Muslims do not practice any form of female genital mutilation.

29 Asmani and Abdi, 17.

In a global 2006 conference, an impressive array of high-level Islamic religious scholars from around the world declared FGM to be both contrary to Islam and an attack on women.<sup>32</sup> Among the scholars present were Egypt's two top Islamic clerics: Dr. Mohammed Sayed Tantawi, the Grand Sheik of Al-Azhar, the foremost theological institute in the Sunni Muslim world, and Grand Mufti Ali Gomaa.<sup>33</sup> Other participants included Hamdi Mahmoud Zakzouk (the minister of religious affairs in Egypt), Sultan Abdelkader Mohamed Humad of Djibouti, and Sultan Ali Mirah Hanfary of Ethiopia, as well as distinguished scholars

In 2009, Egypt's Dār al-Iftā', the international flagship for Islamic legal research, released an extensive statement that denounced "female circumcision" as a harmful cultural rite: "Anyone who is acquainted with the reality of the matter cannot speak except in favor of its prohibition."<sup>36</sup> In January 2010, a group of thirty-four West African Muslim scholars and clerics assembled for the purpose of issuing a fatwa against female genital mutilation.<sup>37</sup> Other prominent scholars who have spoken against FGM include Sheikh Sayyid Sabiq, Sheik Mohammad Arafa, Sheikh Shaltoot, Sheikh Abubakar Aljazairy, Dr. Su'ad Saleh, and Dr. Selim al-Awwa.

Currently, religious scholars worldwide – including those in Egypt, Iraqi Kurdistan, Somalia, Gambia, and Kenya, to name a few – are working alongside health professionals and social workers to eradicate FGM.<sup>38</sup>

WISE © 2017

#### IV. FGM Cannot Be Supported by Analogy (Qiyas)

Proponents of FGM sometimes try to justify it by using *qiyas*, the Islamic legal tradition of analogy, arguing that FGM is analogous to male circumcision and therefore Islamic. However, FGM is not analogous to male circumcision for the following reasons:

1. As explained above, FGM has no basis in Islamic texts, in stark contrast to male circumcision. Unlike male circumcision, FGM is practiced only by some Muslim communities, and even these disagree on the extent and parameters of the cutting. Had FGM been as connected to Islam as male circumcision, the extent of cutting would have been as clearly defined and the practice would have been equally widespread.
2. FGM cannot be compared to circumcision because what is cut in males is skin that has no essential function, whereas in females, functional organs are often removed and modified.<sup>39</sup>
3. There are proven medical benefits to male circumcision, but absolutely no benefits have been reported for FGM – on the contrary, only harm. For example, published medical research suggests that male circumcision is protective against STDs, including HIV/AIDS.<sup>40</sup> In stark contrast, FGM is directly correlated with the spread of STDs, including HIV/AIDS; it has been proven to play significant role in actually facilitating the transmission

of HIV infection through numerous mechanisms.<sup>41</sup> In fact, according to Dr. Su'ad Saleh of Al-Azhar University, FGM resembles not male circumcision but “the custom of burying girls alive, before the advent of Islam.”<sup>42</sup>

#### V. FGM Contradicts the Principles of Islamic Jurisprudence (maqasid al-shari'a)

According to scholarly consensus, the six objectives and principles of Muslim religious law (*Shari'a*) include the protection and promotion of religion (*al-din*), life (*al-nafs*), mind (*al-'aql*), family (*al-nasl*), wealth (*al-mal*), and dignity (*al-'ird*). FGM violates at least five of these principles:

**The Protection of Life:** FGM harms infants, girls, and women, endangering their lives and the lives of their future children.

**The Protection of Mind:** FGM harms girl's minds by undermining their mental and psychosexual health, causing psychosis and trauma.

**The Protection of Family:** FGM prevents the proper fulfillment of conjugal relations and precludes a mutually pleasurable sexual relationship between a husband and wife. Medical evidence clearly indicates that healthy sexual relationships promote health, stress relief, stronger immune systems, better sleep, and even longer life.<sup>43</sup> In contrast, FGM precludes these health benefits and has been linked to infertility and divorce.<sup>44</sup>

**The Protection of Dignity:** FGM harms women's dignity, condemning them to a

life of serial infections and intimate scars.<sup>45</sup> Disfiguring genitalia, on the unproven assumption that it prevents promiscuity, denies humans their divine right to free will and dignity.

**The Protection of Religion:** In many cases, suturing and scars make it impossible for the cut female to attain ritual cleanliness (tahara), denying her the right to worship.<sup>46</sup> The unnecessary health problems caused by FGM prevent a woman from enjoying the two blessings the Prophet has praised: "health and free time for doing good."<sup>47</sup>

## CONCLUSION AND RECOMMENDATIONS

The Shura Council absolutely and unconditionally condemns FGM as a harmful practice that contradicts both the spirit and the letter of Islam, violates international laws on children's rights and women's rights, and endangers populations in need.

The Shura Council underlines that even minor forms of FGM are not mentioned in the Qur'an, and, unlike male circumcision, even limited female hoodectomy has not been declared as sunnah by the Prophetic tradition. The Council also stands against the "medicalization" of the practice, that is, its execution by healthcare professionals in clinical settings.<sup>48</sup> Immediate risks associated with FGM are reduced but not eliminated when the practice is performed in modern medical facilities.<sup>49</sup> Moreover, there is no evidence that FGM creates fewer long-term complications when performed by health-care professionals.<sup>50</sup> Therefore, the Council condemns this unnecessary and harmful

practice in all its forms, in every context, worldwide.

Extensive religious, scholarly, and judicial consensus exists on all forms of FGM, deeming it both un-Islamic and in violation of children's and women's human rights as currently defined by the international community. Yet, activists have discovered that those living in areas where FGM is widespread still believe that FGM is mandated by religion; moreover, they are unaware that FGM is not practiced in most of the world.<sup>51</sup>

The Shura Council believes that the dissemination of religious information of FGM will help eliminate FGM, especially when combined with context-specific, culturally sensitive, grassroots measures. The Council suggests that activists seek the collaboration of local, national, and international religious authorities in the struggle to eliminate FGM.

As part of our ongoing efforts to end gender-based discrimination and champion women's rights, WISE builds the capacity of women by partnering with in-country women led NGO's to pilot innovative projects aimed at transforming behaviors and patriarchal attitudes toward women.

We have implemented impactful projects to address region-specific women's issues. In Afghanistan, WISE partnered with a local NGO to develop an Imam training program over three years on the five rights of women – education, inheritance, child marriage, forced marriage, mobility. In Pakistan, WISE developed a domestic violence awareness campaign for law enforcement. In Egypt, WISE created a model to incentivize practitioners of Female Genital Mutilation to end the practice. In Gambia, WISE developed a long-term educational awareness campaign on the harm of Female Genital Mutilation resulting in a country-wide ban. Contact us if you would like to partner with WISE.
